Description

Overview

The universal solution for old and new generation relays, all kinds of meters and transducers. The first choice for applications requiring the highest versatility (commissioning, etc.). Unique measurement and transient recording functionality.

Supplements all ten binary inputs with analog measurement functions for voltages of up to 600 V and currents (with current clamps). Amplitude, frequency, phase, power measurement, harmonics, recording and analysis of transient signals, event trigger etc.. The inputs are usable with current clamps with voltage output or external shunt and standard current clamp.
